Preferred Material Handling Services & Capabilities

Preferred Equipment Resource offers complete Material Handling Services including: consultation at your facility, system design, preparation of drawings, equipment recommendations, pricing & availability, and cost justification for both New & Used Equipment.

Our design & install packages cover the full range from concept to completion, including: design & layout, mechanical installation, electrical controls, electrical installation, standard and custom warehouse management software, project management and personnel training.

Our extensive experience with all aspects of the material handling industry enable us to deliver your project - **on time & within your budget!**

Storage Systems

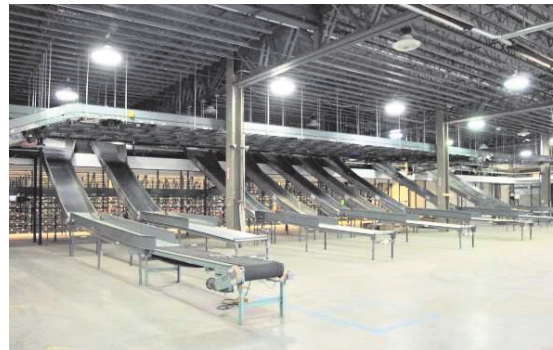

We can help you with design assistance for all types of storage systems, from small parts storage to moving and storing full pallet loads. We can provide equipment for selective pallet rack, drive-in rack, push-back rack, cantilever rack, carton & pallet flow systems, bulk storage racking, and steel shelving in all sizes and configurations.

We also provide specialty small parts storage systems for manufacturing, machine shop, automotive, and fulfillment operations.

Conveyor Systems

Our conveyor system experience begins with simple gravity flow systems and extends to fully automated high speed sortation systems, including controls, software design and implementation.

We provide gravity roller & skatwheeler conveyors, horizontal and inclined belt conveyors, live roller conveyor, overhead chain conveyor, cleated parts conveyors, plastic chain belts, and custom designed conveyors for your special applications.

Mezzanines

Mezzanines are available in many configurations to provide more efficient use of your warehouse space. Clear span construction allows any operations under or on the mezzanine. Rack supported mezzanines allow mixed use above and below. Shelving or bulk rack supported carry the shelf storage configuration to the upper levels.

We will custom design a mezzanine to suit your needs, providing the best materials and style for your application. We can integrate conveyor systems for product transportation and waste removal. We can handle the entire project from concept to completion.
