

EAGLE C.L.A.W.S. Compliance Solutions Guidelines

Eagle Manufacturing, an ISO-9001 certified manufacturer of innovative industrial safety and haz-mat storage products, has developed the **Eagle C.L.A.W.S.** Compliance Solutions Guide. Eagle Manufacturing is the industry leader in supplying the highest quality and best value in safety storage cabinets, safety cans, and hazardous waste management systems. The **Eagle CLAWS** guide is a user friendly self-assessment guide that will allow your own personnel to identify potential environmental, health and safety risks associated with hazardous materials handling and storage in the work environment.

The **Eagle CLAWS** Program is designed as a compliance evaluation system utilized to promote employee and public safety, property protection and environmental conservation by specifying approved products that meet specific federal regulations concerning:

- **Containment**
- **Liquid Handling**
- **Assessment**
- **Waste Management**
- **Safety Storage**

The Eagle **CLAWS** acronym focuses workplace assessment on these critical areas:

Containment

Containment of hazardous materials is required for the protection of the environment from contamination as well as for the protection of employees who work in areas where hazardous materials are stored and used.

Liquid Handling

The handling of hazardous liquids is subject to both safety and health regulations requiring protection for employees who work with flammable, combustible and explosive liquids.

Assessment

Workplace fires and explosions kill 200 and injure more than 500 workers each year. Annual assessment of workplace safety, housekeeping and compliance issues is the best method to prevent future problems.

Waste Management

Waste management is required to decrease the potential exposure associated with handling hazardous waste. The main hazard is flammability. To help prevent fire, hazardous waste needs special precautions for storage, handling, and use.

Safety Storage

Improper storage and handling of flammable liquids is the leading cause of industrial fires. Proper storage of flammable liquids can help eliminate millions of dollars of damage and help save the lives of your employees.

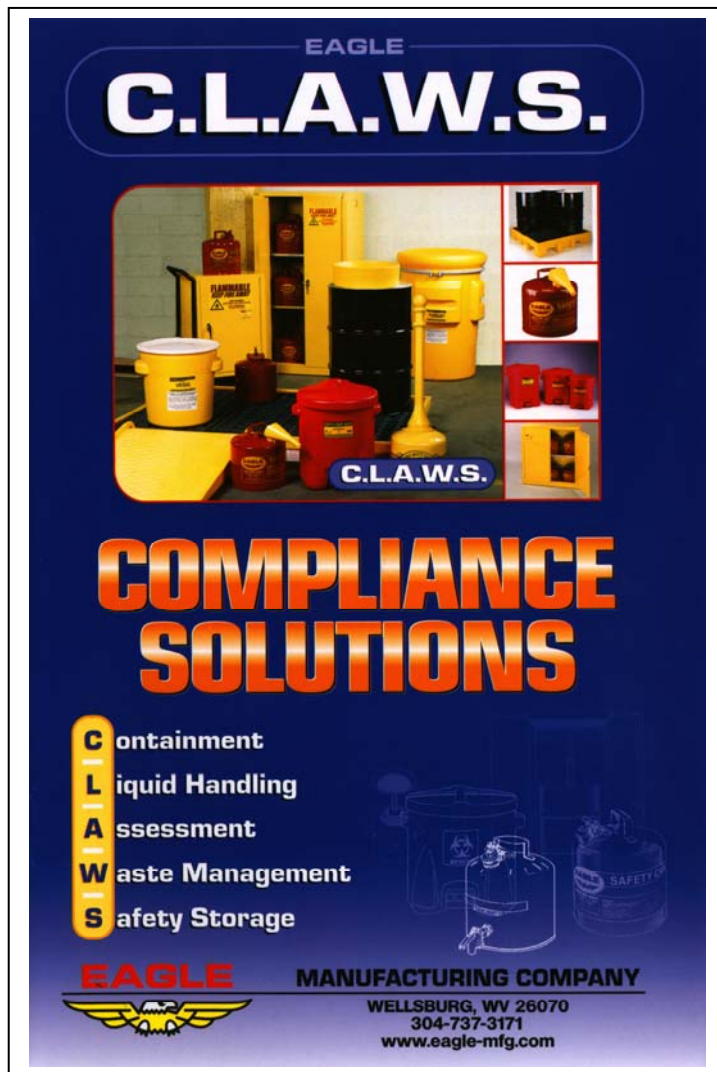

Recommendations are included for each **CLAWS** topic to aid in compliance with specific OSHA, EPA, DOT and local fire codes concerning handling and storage of flammable and hazardous materials. Specific OSHA and Fire Code regulations are cited along with the equipment designed to meet these code requirements. The **CLAWS** guide includes a Glossary of related terms and Chemical Resistance Charts for storage containers. The Eagle **CLAWS** guide also features pages that serve as a useful worksheet for the specification and purchase of approved products for compliance in these critical areas.
